

Beginners Circle, Home Problems 26

1. Aliens sent a message to Earth, saying that their planet system contains three planets Alpha, Beta, and Gamma. They live on the second planet. At this moment, the quality of communication went down, and the only things humans could hear were, "Alpha is not the third planet" and "Beta is the second planet". The scientists found that both statements were wrong. Where do these aliens live?

2. Cut this shape into **three** identical pieces.

3. Wolf, Cat, and Fox went fishing and caught 15 fish altogether. Wolf's catch could be split between himself, Cat and Fox evenly. Cat caught one fish more than Wolf, and Fox caught fewer than everyone else. How many fish did each of them catch?
